## Introduction

The Data Bank in the Information department of the Geological Survey and Mineral Resources Board (GSMRB) - Ministry of Oil and Minerals has a lot of technical reports, researches, specialized field studies and the final reports of Geological Survey and Mineral Resources for minerals prospecting and exploration in Yemen which has been done by ( GSMRB ) team, researchers and foreign companies.

For the necessity of information that is represents the main data base. The department collected these data sorted and classified them to become the main data base and produced the National bibliography to help the users and investors to get their information easily.

These bibliographic data base on the earth sciences of Yemen has been compiled under CDS / ISIS software , it has been sorted according to the classification number to meet the needs of users and can search or retrieve through any records easily, through this bibliography we have opportunity to present a list of documents on the earth sciences of Yemen as a public service and to fulfill out responsibility as civil servants.

This publication is an opportunity to look back to Geological Survey and Mineral Resources Board efforts it is also a challenge to look to the future when the bibliography is enriched with up to date papers written by various projects and local geologists of the country and provide by the Nation with the information required for further research and exploration that may result in the discovery of an economic mineral resources.

My appreciation is great to Dr. Ismael Al Janad the chairman of GSMRB , Eng. Ali bin Shamlan the deputy chairman of the GSMRB and Eng. Amin Ahmed Abdalla General Manager of Information who support , supply and facilitate to the information department , and also my thank to my colleagues Eng. Abdul Aziz Mohamed Salem, Eng.Fahd Mohamed Al Baraq and Miss Hala Abdallah Al Shutfah who help me in the revision of the geological descriptors and preparing this bibliography.
